

## Resistivity

# Resipod

---

A comprehensive solution for measuring the electrical resistivity of concrete

---

### Productivity

All-in-one solution for concrete electrical resistivity testing both in the lab and on-site

### High quality

Reliable, accurate, and standardized and faster than laboratory RCP testing

### Reliability

Rugged waterproof construction for use in many conditions and environments

## Instrument

### Tech Specs

Measured Quantity	Electrical resistivity [kΩcm]
Accuracy	From $\pm 0.2$ to $\pm 2$ kΩcm (depending on resistivity range)
Instrument Firmware	Highest resolution available for a surface resistivity instrument Current flow indication and poor contact indication Hold, save, and delete function
PC Software	ResipodLink to view and manipulate the data on a connected PC. It also allows a variable contact spacing to be set
Display	Pixel graphic LCD
Memory	500 measured values
Connections	USB type B
Measuring Range	1 to approx. 1000 kΩcm (depending on probe spacing)
Probes / Electrodes	In addition to the standard Wenner probe with spacing of 50 mm or 38 mm (1.5"), additional variable spacing probe and bulk resistivity accessories available

Standards & Guidelines	Description
AASHTO T358-15	
ASTM 1876	
CSA A23_2_19	
EN 12390-19 2021	

Present in +100 countries, we serve inspectors and engineers all over the world with the most comprehensive range of InspectionTech solutions, combining intuitive software and Swiss-manufactured sensors.
