

Performing ground surveys with advanced capabilities

We always love to hear how our customers use our products and how it affects their business. Today we meet the team at [Geotechnical Engineering Ltd](#) to hear their story...

Innovating has been a natural part of evolution for Geotechnical Engineering. For over 60 years, the team have conducted ground and building surveys before drilling and construction. But there's nothing prehistoric about these guys...

After hearing about the capabilities of the Proceq GS8000 subsurface mapping system, they thought it must be some kind of marketing trick and had to try it out for themselves... They haven't looked back since!

Geotechnical Engineering have now evolved immensely with significant growth, thanks to their advanced capabilities, accuracy and flexible services.

- David Andrews, Senior utility surveyor at Geotechnical Engineering Ltd.
