

Extracting the Deepest Insights from GPR Data

Here at Screening Eagle, we love to hear how our technologies are being used to increase quality, safety and longevity of the built world.

Meet Bill Steinhart for example, Senior Geophysicist at [Rettew](#) and one of Screening Eagle's valued customers who shared their story with us at [#KEY22SET](#) Built World Keynote and Product launch Event.

The best decisions are always made with clarity.

This couldn't be truer for Bill Steinhart from Engineering Design firm, Rettew.

Bill scans all kinds of structures. From concrete slabs and underground utilities, to world-famous landmarks and historical cemeteries.

He often performs sophisticated post-processing to extract deep insights that would otherwise be hidden to the human eye.

These insights are more than just data. They let Bill uncover the past, understand the present, and provide clarity to make the right decisions for the future.
